

Every Case is Unique - We Resolve the Issues

Nurse Case Management

Our nurse case managers have extensive experience managing all types of injuries—from catastrophic to simple sprain/strain injuries. The medical file is assessed, a plan of action is developed, and the appropriate care is sought and coordinated to ensure that each client has the opportunity for the optimal medical outcome.

We understand the workers' compensation arena and are knowledgeable about the healthcare providers in each of our service areas. Each case is administered from an objective, non-adversarial and clinical perspective utilizing MDO benchmarks and guidelines as well as individual case specifics.

The result is effective, proactive case management with real time reporting according to our clients' specific directives.

Resolution Focused-Result Driven

- Proven track record
- Experienced nurses
- Cost effective, customizable resource
- Ongoing systematic evaluation of case progress
- Real time reporting
- Effective & appropriate services identified throughout spectrum of care
